dedicated custom built desktop agents

source documents for resources

estimates/projections for your way forward

client advisement

consulting, training, advisement

Need help using the new A.I. systems? Our company's primary function is to help you use the new Ai tools as you need them through our expert advisement and consultation.

We listen and strive to understand what you want to do. In short, we assist you in developing a way to learn and use Ai safely. Whether you are an individual or a small business our solutions are build around you.

create your data for you

locate, compile & store your data

We offer onsite or remote data creation services. We help you create spread sheets, data sets or small data bases to house your data. Your data can mean business information like receipts, letters, email etc.

This data is used to build your own LLM or Ai Agent, which we build together. Access to this data is needed to create these tools, and that is where we come in and can help.

write custom prompts

patterns, personas & your data

Once we understand your needs, we will write custom prompts tailored for you and then train you on how to write your own. Any prompts or code is yours – we use the ‘copies’ to work from.

These prompts are commands necessary to make Ai function and must be formatted in certain way so that LLM and Ai can process the command; the better the command or ‘prompts’ the better results.

illustrated plans & guides

use your data for illustration

Many times an illustration of something can really add to the meaning. The ability to communicate in a clear way the subject matter in question can be greatly enhanced with a picture of some kind.

These graphics, charts or infographics are made for each client so they have portable documents illustrating what going in their business. We create these simple references showing how that all works with their business and how it used in LLM's or Ai Agents.

dedicated desktop agents

LLM, ML and desktop agent

When we pull all our services together the result is an 'Ai Agent'. Our services are designed to create this application using your data and organize it into uses for LLM and Ai. Using a popular IT figure of speech, 'keep it local' and for our clients this means they have full access and control of their data on local systems.

All the data can be placed in a cloud or on one of your devices – your choice. Either way, your Ai Agent will be exclusively dedicated to your use of LLM or Ai.

source documents

small, simple and exclusively yours

Source documents really have value and keeping them accessible is key in making sure all parties informed, measured and in sync. We can help wrangle this information which in turn will be stored in a repository of your choosing.

A recommended starting point is the Google Suite however in the end we always recommend local storage for of all digital assets, LLM's ML's and Ai resources. That base is used to run your LLM's, ML's or Ai Agents. Wherever that it is, our goal is to make sure you own it have full access and control.

your way forward

projections, estimates and ideas

Promptline Studio sets you up for success. When this step comes, we make sure you are not left hanging with unfinished business. Going a step further, efforts are taken to suggest a way forward with new ideas and estimates.

We will assist you in creating draft ideas, plans, projections, estimates or suggestions on the best practices going forward. There are no data grabs or hidden costs here, just simple basic help.
